Weholite Solution for the Yuba-Wheatland Canal

The Yuba-Wheatland Canal Project has been “on the drawing board” for nearly 25 years and has finally come to fruition. With the engineering design efforts from **GEI Consultants** and **Christensen & Associates**, the project was specified with the **Weholite HDPE Piping Solution** to maintain 100% leak-tight, permanently restrained joints. Pipe & fittings sizes ranged from 36” to 96” for the several thousand feet of Irrigation Siphons and Road Crossings.

Lorang Brothers Construction began site work in early August of 2008 and began installing Weholite pipe & fittings on September 3, 2008. The contractor has done an exceptional job handling & installing the Weholite Piping System maintaining leak-tight joints. The project is expected to be finished by the middle of October in time for the start of the “wet season”.

Weholite provided a true “**Piping Solution**” in addition to saving the Agency & local community over \$1M!
